CABINETS:

The cabinets are available in the width of 17,71" and 35,43" and in the height of 28,34", 55,51" and 82,67" for a depth of 16,92". The unit of 55,51" can be put on the unit of 28,34" (taking away the feet of the laid upon element, the final height is still 82,67"). The internal elements are made of ennobled wood of aluminium colour in 0,98" or 0,70" thickness and with the back side of 0,47". The shelves can be put at different height thanks to the multiple drilling of the sides where they are fixed by metallic stirrups. All the elements are equipped by plastic levelling feet of the minimal height of 1,02 and the maximal one of 1,37". The composition have to be equipped with simple finishing tops or with tops and sides. These elements are realized in wooden agglomerate of 1,37" thickness with the external part covered in shorn of the three finishings and the internal one is counter plated in silver colour for an overall thickness of 1,41". Only the compositions of 28,34" and 55,51" height equipped with finishing sides and tops have the possibility to add the bases with feet, these are realized by ennobled wooden aggregate silver colour of 0,98" thickness and bordered by an aluminium thin sheet put inside an abs profile of 0,03" thickness. Anodized aluminium feet are put under them to obtain an overall height of 4,33" (N.B. with the application of the bases the plastic levelling feet put in the series equipment are not to be used).

The frontal elements of 0,74" thickness can be of different kinds; 1) Wooden door, realized in wooden agglomerate covered in shorn on both the sides with the external part inlaid with the central vein in horizontal and vertical external stripes, the border is in wood with a 0,59"/0,39" thickness, available in the three essences. 2) Frame door made of a mdf frame covered by the same shorn and finishings as the wooden doors, while the internal part can be in semitransparent white satinized tempered glass of 0,15" thickness, or in mdf of 0,31" covered in shorn with horizontal vein on the external side, or always in mdf of 0,31" but with the external part in leather in black, beige or dark brown colours with vertical contrasting seams and internal part in grey colour fabric.

OPEN CENTRAL CABINET UNITS:

They are available only in the height of 5,51" and in the width of 35,43" and 70,86", have all the visible parts, back included, covered by shorn with wooden borders, the shelves, sides and little sides are of 1,41" thickness while the backs are of 0,74". These elements are always to be placed between two cabinet elements and a finishing top ; " they cannot be used as single elements".

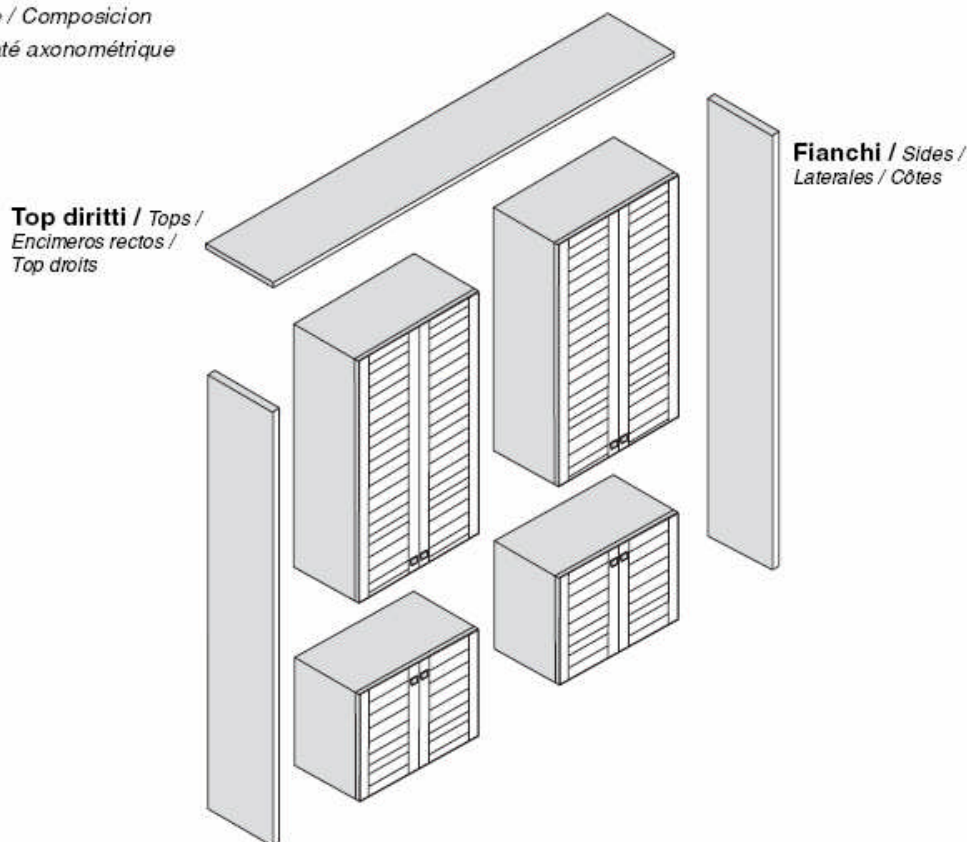

OPEN CABINET UNITS:

They too are realized by wooden agglomerate panels of 1,41" thickness and bordered in wooden essence. Except for the wall unit, all the other elements are equipped in series with 2 back panels of 0,74" thickness, covered in shorn that are pressure fixed giving stability to the structure. Some supplementary panels, useful if people want to close further the back part, are available as optional. The available dimensions are of cms L. 35,43", W. 11,81", H 39,76" or 74,01" including the base with aluminium feet, besides the modular solution foreseen only for the height of 74,01" and made of lateral sides, central sides, elements with shelves of 35,43" and base.

The wall unit is available in the dimensions of cms L. 35,43" W. 11,81" H 35,43" and is equipped with the necessary hardware to be fixed to the wall. It is however necessary to analyse the structure of the wall where these elements are to be fixed and to take the necessary precautions as shown by the assembly scheme and not to exceed the specified load.
